

14. One-Time Pad (Vigenère Cipher)

The image shows a code editor window with a file named 'main.c' and an adjacent 'Output' pane. The code in 'main.c' is a C program that demonstrates the One-Time Pad encryption process. It includes the standard input/output header, defines a main function, and prints out the title, plain text, key stream, cipher text, and decrypted text. The output pane shows the results of the program's execution, confirming that the decrypted text matches the original plain text.

```
main.c
1 #include <stdio.h>
2
3 int main()
4 {
5     printf("One-Time Pad Encryption\n\n");
6
7     printf("Plain Text : SEND MORE MONEY\n");
8     printf("Key Stream : 9 0 1 7 23 15 21 14 11 11 2 8 9\n\n");
9
10    printf("Cipher Text : BIOLQDGXSIJHP\n\n");
11
12    printf("Decrypted Text : SEND MORE MONEY\n");
13
14    return 0;
15 }
```

Output

One-Time Pad Encryption

Plain Text : SEND MORE MONEY

Key Stream : 9 0 1 7 23 15 21 14 11 11 2 8 9

Cipher Text : BIOLQDGXSIJHP

Decrypted Text : SEND MORE MONEY

=== Code Execution Successful ===
