

6. Break an Affine Cipher

The image shows a code editor window with a file named 'main.c'. The code is a C program that prints the results of an affine cipher frequency analysis. The code is as follows:

```
1 #include <stdio.h>
2
3 int main()
4 {
5     printf("Affine Cipher Frequency Analysis\n\n");
6
7     printf("Most Frequent Letter : B\n");
8     printf("Second Frequent Letter : U\n\n");
9
10    printf("Possible Key Values\n");
11    printf("a = 5\n");
12    printf("b = 7\n\n");
13
14    printf("Cipher can now be decrypted using these keys.\n");
15
16    return 0;
17 }
```

On the right side of the editor, there is an 'Output' panel showing the results of the program's execution:

```
Affine Cipher Frequency Analysis

Most Frequent Letter : B
Second Frequent Letter : U

Possible Key Values
a = 5
b = 7

Cipher can now be decrypted using these keys.

=== Code Execution Successful ===
```
