

Input

```
import random

capacity = [0] * 9
rounds = 0

while 0 in capacity:
    i = random.randint(0, 8)
    capacity[i] = 1
    rounds += 1

print("All capacity lanes filled after", rounds, "rounds")
print("Full diffusion achieved")
```

Output

```
All capacity lanes filled after 37 rounds
Full diffusion achieved
```
